Collections Care

Organic Materials

Humans have used natural materials from both the plant and animal world to craft tools, clothing, and decorative objects throughout our history and prehistory. Each of these materials has special preservation concerns that stem from a variety of issues such as breakage, internal composition and/or flaws, or special vulnerability to light exposure, pollutants, moisture, and high or fluctuating humidity levels. As with any museum or personal collection, appropriate handling techniques and storage are the first line of defense in the preservation of objects made from any of these materials. Always use clean cotton or nitrile gloves when handling objects and support with both hands; move objects using a tray support, drawer, or box; and practice general good housekeeping in storage and exhibition areas. Specific information and tips appear in the links below.

General Care
